## PDU44004 | SWITCHED ATS PDU SERIES

# Deliver and monitor reliable, redundant power to electronic equipment, servers, and network/telecom devices

Ensure continued operation of critical devices with the CyberPower PDU44004 Switched ATS PDU. Ideal for data centers and network closets, this unit provides power redundancy to single-corded connected equipment. If power for the primary source exceeds the lower or upper thresholds, or if power fails, the PDU will switch to the secondary power source to ensure continuous operation. The PDU will switch back to the primary power source when incoming power becomes stable. Additionally, this unit offers real time remote and local monitoring and outlet management.

The PDU44004 supports inputs between 200-240V and includes (12) IEC C13 outlets. Dual IEC C14 power cords are plugged into separate power sources (A and B), and information about each power source is clearly displayed on the front panel LED indicator lights. Other features include an LCD with selectable background color, built-in web interface, and power event notifications. The CyberPower PDU44004 is protected by a three-year limited warranty.
